

West Wales Centre - Siting Caravans

When setting up the Rally Field, one of the first tasks as a Marshal is to mark out the field to the correct spacing's as depicted in the example below. A plastic peg should be positioned to locate the line the caravan shall take when pulling onto the pitch. The front offside of the caravan shall be stopped so it is level with the marking peg (supplied in the Rally Kit).

The measurements in the example below are the current Minimum Acceptable and must be adhered to at all times, failure to do so could cause hazards in emergency situations, cause damage to adjacent units or loss of life in a fire.

For hard standing pitches only - the measurements can be 9m / 30ft (as no awnings are used)

NB: A single, Two man pup tent may be erected within the area normally reserved for an awning, its is recommended that a wind break is positioned around the pup tent as additional protection and as visual aid.
